BvL: Dairy Feeder app now available in new entry-level version: “Dairy Feeder Go”

The feed management system V-CONNECT Dairy Feeder from BvL is now available in a version for everyone – and it will even be free for customers who order a new machine in the future.

The goal of the digital V-CONNECT Dairy Feeder feed management system from BvL has always been to provide transparent feeding data. Several years ago, the company also introduced an app for the system. Just in time for the EuroTier trade fair in Hanover, the machine building specialist in Emsbüren is introducing a new entry-level version of this app: Dairy Feeder Go. For customers who order a new feeder wagon in the future, the app is even included at no charge.

When using the entry-level version of the Dairy Feeder app, the customer can enter their animal groups, feed components, and rations after registering the app. During the feeding process, the feeding data – the target quantity of the single recipe

components – can be displayed as needed. In case of changes in the quantities of single feed components, the number of animals in groups, or the entire ration, this can be entered in the app. The user also has the option of entering the loaded feed quantities.

When feeding is complete, the feeding accuracy of the load – a variance comparison – can also be displayed in the form of a report. The farmer can also view and print the loading schedule to obtain an overview of the rations. Since the Dairy Feeder Go is a standalone solution, there are no special requirements for the weighing device on the mixer wagon. This makes it easy to get started with digital feed management.

For more information about our digital solutions for the everyday feeding process – and especially about the upgrade versions of the

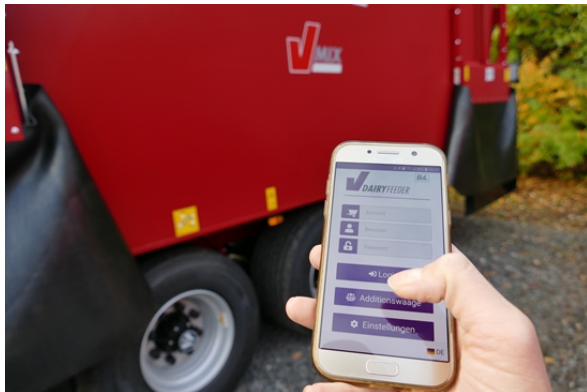

V-CONNECT Dairy Feeder – visit us at this year's EuroTier in Hanover: Hall 27, Booth G16.

After downloading the free Dairy Feeder app, the customer can register and start entering animal groups and rations right away.

Use of the V-CONNECT Dairy Feeder system facilitates daily feeding work on the farm by providing good transparency and control.

The BvL Group is a family operated business, now in its fifth generation. The managing directors are Bernard van Lengerich and Bernhard Sievering, and the company headquarters is in Emsbüren in the Emsland region. The BvL Group has activities in three separate business divisions: Agricultural Machinery, Surface Finishing and Electrical Engineering.

In a nutshell, BvL stands for: Enthusiasm, Responsibility, and Passion! Because with more than 160 years of experience, BvL is firmly established on the market as a dynamic, modern industrial enterprise with over 60 million euros in sales and about 400 employees. An informal working atmosphere fosters flat hierarchies and an innovative team spirit. Personal contact and a positive communication culture have a long tradition at BvL.

Bernard van Lengerich Maschinenfabrik GmbH und Co. KG is among the world's leading manufacturers of feed technology solutions. In addition to feed mixing

wagons, the product spectrum includes modern removal technology, spreading technology, biogas technology and digital products. Almost 70 percent of machine sales are generated abroad. The company's focus is on high standards of quality and custom tailored machines with a wide range of products, which is clearly reflected in the concept "Made for me!"
